-

### Agenda

Meet new regulatory requirements. Ensure visibility and monitoring of personal data use. The new General Data Protection Regulation (GDPR) represents a fundamental reshaping of how organizations need to manage, process, and store the personal data of EU citizens. It places appropriate controls around the use of collected personal data, dictates requirements to comply with those controls, and defines substantial fines to be levied in the event of noncompliance. That means your organization must be able to identify the entire inventory of an individual's data, access its risk status, and monitor it for noncompliance. Join us to find out how Data Insight can help!

## Veritas SaaS Backup, what is it and how does it work?

Thursday, 1 March 2018

Host: Denis Udovenko, Daniel Sorenby

10:00am – 11:00am (GMT)

### Agenda

Time for the vTSS to introduce you to Veritas Cloud Storage, a software-defined, scale-out, storage solution which enables innovative apps and data management & governance at scale for IOT, GDPR and cloud workloads. Its Integrated Cognitive Engine (ICE) makes unstructured data come alive – increasing information capital, storing massive amounts of data, and enabling data intensive, cloud-native apps, while assuring regulatory compliance requirements are easily met.

Go through how Cloud Storage works the different components and demonstration the solution.

## Modernize Data Protection Update

Thursday, 29 March 2018

Host: Yves Robin, Xavi Padilla

10:00am – 11:00am (GMT)

-

### Agenda

Modernizing data protection is being driven by the rapid shift to the digital business, massive data growth, cloud and new applications. Organizations can no longer afford ineffective, costly and complex data backup strategies. Instead, they are looking to modernize their data protection strategy across virtual, physical and cloud environments.

Let us show you how Veritas solutions can help you to modernize your data protection!
