A few of this week's headlines

Cyberkriget eskalerar – svenska företag i fara

Sjukhusen i Västerbotten förstärker säkerheten mot cyberattacker

FI ska föreslå åtgärder för stärkt cybersäkerhet

"Vi har en cybersäkerhetsskuld som vi inte betalat av"

Definitions

Cybersecurity

Application of technologies, processes and controls to protect systems, networks, programs, devices and data from cyber attacks

Cyber attack

An attempt to disable computers, steal data, or use a breached computer system to launch additional attacks (including malware, phishing, ransomware, man-in-the-middle attack, or other methods)

Cybercrime is big business

- Estimated cost up from 6 trillion in 2021 to 10,5 trillion USD in 2025*
- Ransomware attacks on healthcare organizations estimated to quadruple from 2017 to 2021*
- More profitable than the global trade of major illegal drugs*

Ransomware

First death reported following a ransomware attack on a German hospital

Death occurred after a patient was diverted to a nearby hospital after the Duesseldorf University Hospital suffered a ransomware attack.

- The patient, identified only as a woman who needed urgent medical care, died after being re-routed to a hospital in the city of Wuppertal, more than 30 km away from her initial intended destination, the Düsseldorf University Hospital.
- The Düsseldorf hospital was unable to receive her as it was in the midst of dealing with a ransomware attack that hit its network and infected more than 30 internal servers on September 10, last week.
- The incident marks the first-ever reported human death indirectly caused by a ransomware attack.

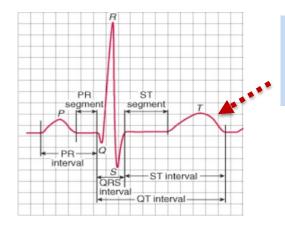

- FDA safety communication during 2017
- Implantable cardiac devices are vulnerable to cybersecurity intrusions and exploits

08/29/2017	Firmware Update to Address Cybersecurity Vulnerabilities Identified in Implantable Cardiac Pacemakers	released a firmware update to address cybersecurity vulnerabilities identified in implantable cardiac pacemakers. The firmware update continues efforts to mitigate confirmed vulnerabilities discovered by an independent research firm in 2016.	
01/09/2017	Cybersecurity Vulnerabilities Identified in Implantable Cardiac Devices and Transmitter ✓	The FDA became aware of cybersecurity vulnerabilities in these devices after an independent research t released information about these vulnerabilities.	

- MedSec (the "independent research firm") hacks the home transmitter during 2016
- Demonstrates with a pacemaker programmer
- Delivers "shock on T"

- Vulnerable period
- Induces ventricular fibrillation
- Used to test the device

- Short seller Muddy Waters Capital, holds a short position in the pacemaker company
- Muddy Waters publishes the info
- Stock value drops for the pacemaker company
- Muddy Waters makes a profit
- Pacemaker company sues Muddy Waters

	2017, both the Food & Drug Adm warnings about the implanted (Department of Homeland
At the same time		patch to rectify the	problem, while we warned that

- IOActive researcher Barnaby Jack has reverse-engineered a pacemaker transmitter to make it possible to deliver deadly electric shocks to pacemakers within 30 feet and rewrite their firmware.
- Barnaby Jack:

"Yeah, the software I developed allows the shutting off of the pacemaker or ICD, reading and writing to the memory of the device, and in the case of ICDs it allows the delivering of a high voltage shock of up to 830 volts."

Different types of attacks affecting medical devices 1(2)

• Hijacking medical devices intending to harm patients

- Devices can be disabled or be controlled to harm patients
- Pacemakers, implantable defibrillators and insulin pumps
- No real attacks have been publicly reported
- High media interest ("It is a good story")
- Can even be connected to stock market manipulation

Ransomware attacks

- Several reported attacks
- Visibility of attack is high
- Fast payback when ransom is payed \$\$\$

SSS

Different types of attacks affecting medical devices 2(2)

Healthcare data breaches

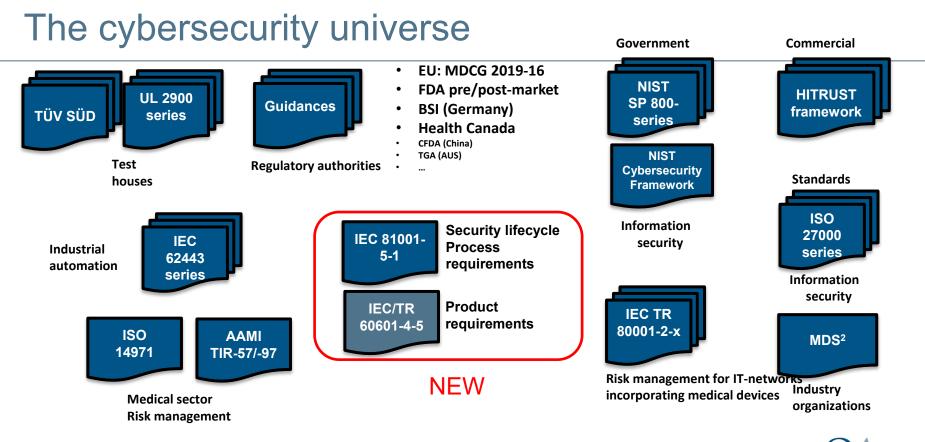

- During 2021 appr. 2 data breaches with 500 records or more per day in the US —
- In 2015 Anthem Inc was breached and affected 78 million (!) individuals **4** \$\$\$
- Questionable payback, possibly using blackmailing
- Theft of other types of data through medical devices ٠
 - Credit card and health insurance credentials
 - Established value in the black market _
 - Large scale thefts have been publicly disclosed _
 - Mid-term value if used for other types of fraud
- ŚŚŚ Denial-of-service attacks to disrupt hospital operations
 - Few reported attacks
 - Questionable payback, possibly using blackmailing —

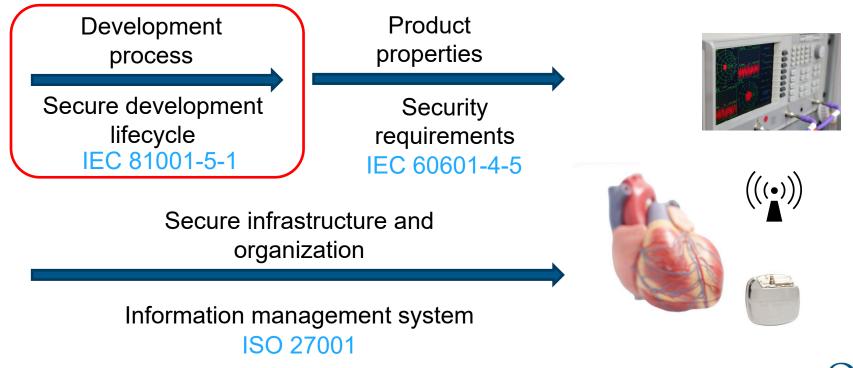

QAdvis AB 2022

The Trinity

IEC 81001-5-1

Health software and health IT systems safety, effectiveness and security Part 5-1: Security - Activities in the product life cycle

- Transposition of the Industrial Automation standard IEC-62443-4-1
 - Security for industrial automation and control systems Part 4-1: Secure product development lifecycle requirements
- Complements IEC 62304 with tasks related to cyber security

Which processes are affected?

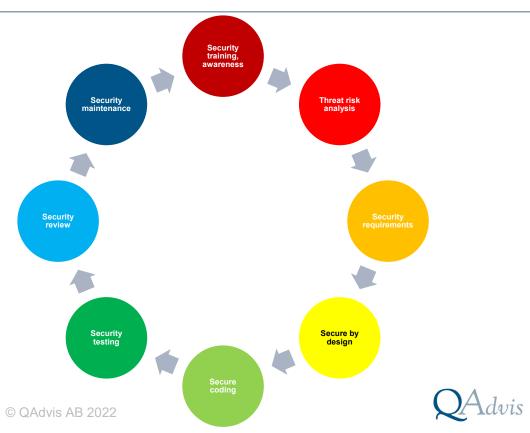

- Risk management
- Software development
- Customer complaints
- Incident reporting
- Supplier management
- New: Vulnerability management

Secure product lifecycle

Security related tasks during the entire product life cycle

- Security-focused risk analysis
- Security best practices
- Secure coding standards
- Static code analysis
- Penetration testing
- Track vulnerabilities
- Monitor supply chain vulnerabilities

QAdvis AB 2022

Drivers shaping the future of healthcare*

- The need to act agile
 - Cybercrime actors are not resting, and manufacturers must adapt
- Ecosystem coordination
 - Collaboration with vendors and business partners requires new solutions
- Increase in number of devices
 - Smart sensors, health wearables must be registered and linked to consumers
- Data explosion
 - With lots of devices, lots of data and lots of sharing, data privacy becomes high(er) priority
- Artificial intelligence
 - Protection against counterfeit functionality, malicious model manipulation, malicious training
- Usability
 - Cybersecurity solutions must be manageable by consumers and healthcare users

Cybersecurity is not an optional feature

- The world, including health care, is digitalized
 - Development accelerated by the Covid-19 pandemic
- Cybercrime costs expected to increase with 15% per year*
- Act now, don't sit on your hands
 - Use the standards and tools that are available
 - Focus on risk management, not just compliance
 - Build a team with skills that go beyond traditional "security thinking"
 - Effectively integrate security and privacy capabilities
 - Identify ecosystems of partners to collaborate with
